

Wastewater Sources (residential)

The everyday appliances we use in our homes, schools and businesses produce the wastewater that JCW collects and processes. In our homes, wastewater flows into the main sanitary sewer drain under your house, which connects to JCW's sanitary sewer system at the edge of your property. The JCW sanitary sewer system directs all wastewater to the closest wastewater treatment facility. The volume of water used by plumbing fixtures, appliances, toilets, baths, laundry machines and dishwashers results in wastewater being 99 percent liquid.
